EXPERIENCE

Software Developer Intern

Jan 2026 – Apr 2026

Royal Bank of Canada (RBC)

Toronto, ON

- Shipped a JOSE-compliant cryptographic service for Open Banking, securing data via asymmetric encryption and JWT signing across distributed microservices.
- Cut application startup time by 80% by replacing sequential bean initialization with a multithreaded parallel loader in Spring Boot.
- Containerized services with Docker and deployed to OpenShift via Kubernetes; built CI/CD stages in Jenkins and resolved regressions via Dynatrace tracing.
- Built DDP Hunt, a real-time scavenger hunt app (Next.js, MongoDB) as a Project Lead along with my co-op, with QR-code claiming and live leaderboards — used by 30+ employees across two divisions.

Technical Systems Analyst Intern

Sep 2025 – Dec 2025

Royal Bank of Canada (RBC)

Toronto, ON

- Automated IAM data workflows in Python, cutting access-certification and orphan-account processing time by 40%.
- Built SQL pipelines ingesting millions of identity records from 5+ enterprise systems (Active Directory, SailPoint, ServiceNow).
- Created Tableau dashboards consolidating IAM metrics across 3+ data sources, reducing manual reporting for quarterly audits.

Machine Learning Engineer Intern

Jan 2025 – Apr 2025

Meta Trading Club

Remote

- Built a React chatbot integrating the OpenAI API with structured-output parsing, serving 10+ users with real-time personalized responses.
- Engineered Python NLP pipelines using prompt-engineered LLM calls to infer personality traits from free-text input for personalized assistant behavior.

PROJECTS

DevFlow | Next.js, TypeScript, Supabase, Gemini AI, GitHub OAuth, PostgreSQL

- Built an AI-powered PR review dashboard integrating GitHub REST API with Google Gemini for automated bug detection and severity ratings.
- Reduced AI generation costs by 60%+ via review caching in Supabase PostgreSQL with Row Level Security; deployed on Vercel with sub-2s cold starts.

EmotionSense | Python, TensorFlow/Keras, OpenCV, Flask, NumPy

- Trained a CNN on 35K+ facial images to classify 7 emotions with 75% accuracy; served predictions through a Flask REST API with CORS-enabled endpoints.
- Implemented multi-strategy face detection using OpenCV Haar cascades with histogram equalization fallback for robust real-time recognition.

MovieMatch | Python, Scikit-learn, Streamlit, Pandas

- Developed a content-based movie recommender using TF-IDF vectorization and cosine similarity across a 5K+ movie dataset.
- Built an interactive Streamlit UI for real-time recommendations and deployed via Heroku with Procfile-based configuration.

SKILLS

Languages: Python, JavaScript/TypeScript, Java, C, C++, SQL, Bash

Backend & APIs: Spring Boot, Spring WebFlux, Node.js, Next.js, Flask, RESTful APIs, JOSE/JWT, OAuth 2.0

AI & ML: TensorFlow/Keras, OpenCV, OpenAI API, Google Gemini, Prompt Engineering, NLP, RAG

Databases: PostgreSQL, MySQL, MongoDB, Neo4j, Redis, Supabase

Infrastructure: Docker, Kubernetes, OpenShift, AWS, Jenkins, CI/CD, Dynatrace, Git/GitHub

Frontend: React, Tailwind CSS, Streamlit, Three.js, Framer Motion

EDUCATION

Seneca Polytechnic

North York, ON

Computer Programming and Analysis | **GPA: 4.0 / 4.0**

Jan 2024 – Dec 2026

Leadership: Director of Technology, CUSEC (Canadian University Software Engineering Conference); VP Technology, Google Developer Group on Campus
