EXPERIENCE

Software Developer Intern

Jan 2026 – Apr 2026

Royal Bank of Canada (RBC)

Toronto, ON

- Designed and shipped a cryptographic service following JOSE standards for RBC's Open Banking platform, securing client data transmission across distributed systems via asymmetric key encryption and token signing; integrated with upstream and downstream services through versioned REST API contracts.
- Cut application startup time by 80% by replacing sequential bean initialization with a multithreaded parallel loader; service is stateless and horizontally scalable behind a load balancer in production.
- Containerized services with Docker and deployed to Red Hat OpenShift via Kubernetes manifests; contributed Spring Boot pipeline stages to the team's Jenkins CI/CD workflow and resolved performance regressions through Dynatrace trace analysis.
- Independently designed and shipped DDP Hunt, a real-time internal scavenger hunt platform in Next.js and MongoDB, featuring QR-code item claiming, concurrent leaderboard tracking, and reward redemption — used by 30+ participants across RBC Digital and Wealth Management Technologies, and demoed to senior leadership as a candidate tool for improving employee onboarding experience.

Technical Systems Analyst Intern

Sep 2025 – Dec 2025

Royal Bank of Canada (RBC)

Toronto, ON

- Automated recurring IAM data workflows for the Identity & Access Management Analytics & Governance team using Python, eliminating manual steps in access certification and orphan account detection pipelines and cutting processing time by ~40%.
- Engineered and maintained SQL pipelines ingesting millions of identity records from 5+ enterprise source systems (Active Directory, SailPoint, ServiceNow) into a centralized analytics store; tuned slow queries with index optimization and execution plan analysis to meet SLA targets for Global Cyber Security.
- Built Tableau dashboards consolidating IAM metrics across 3+ data sources, giving leadership a single pane of glass for access governance KPIs and reducing manual reporting effort ahead of quarterly audits.

PROJECTS

Somnio | *Next.js, Neo4j, Node.js, Three.js, JWT*

- Built a full-stack social platform with AI-powered dream similarity matching (70%+ accuracy) using a Neo4j graph database for relationship mapping, 20+ RESTful API endpoints, JWT authentication, and a Next.js frontend.
- Designed an immersive Three.js 3D network visualization for real-time dream relationship navigation with emotion-based rendering — no third-party graph libraries.

LEADERSHIP & ACTIVITIES

Director of Technology

Feb 2026 – Present

CUSEC (Canadian University Software Engineering Conference)

- Leading two teams (Tech General & Tech Growth) to build the CUSEC 2027 website and evolve the conference scavenger hunt platform; previously owned UI/UX development for CUSEC 2026.

VP Technology

Jan 2026 – Present

Google Developer Group on Campus @ Seneca Polytechnic

- Spearhead 4+ technical workshops and study sessions per term, driving 150+ student attendees and fostering a hands-on developer learning community.

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, Java, C, C++, SQL, Bash

Backend & APIs: Spring Boot, Spring WebFlux, Node.js, Express.js, RESTful APIs, JOSE/JWT, Next.js

Data & ML: TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, NLP, data pipelines

Databases: PostgreSQL, MySQL, MongoDB, Neo4j, Redis

Infrastructure & Tooling: Docker, Kubernetes, Red Hat OpenShift, AWS, OIDC, JOSE, Git/GitHub, CI/CD, Jira, Linear, Tailwind CSS, Three.js

EDUCATION

Seneca Polytechnic

North York, ON

Computer Programming and Analysis | GPA: 4.0 / 4.0

Jan 2024 – Dec 2026
